

Phenylpropanolamine

Why has my veterinarian prescribed this medicine?

Phenylpropanolamine is used to treat dogs with urinary incontinence (unable to hold their urine). This medication is classified as an alpha adrenergic stimulant. This medication has also been used to help manage nasal congestion.

How do I give this medication?

"If the dose is given only once a day, try giving it at bedtime to ensure that the effects last through the night."

- Give this medication to your pet as directed by your veterinarian. **READ THE LABEL CAREFULLY.**
- Try to give this medication at about the same time(s) each day.
- If the dose is given only once a day, try giving it at bedtime to ensure that the effects last through the night.
- **DO NOT** give the pet more medicine than directed.
- **DO NOT** give the medicine more often than directed.
- **DO NOT** stop giving this medication to your pet without first consulting the veterinarian. Call your veterinarian ahead of time if your pet requires refills of the medication.
- Try not to miss giving any doses.
- It may take several days before the medication takes effect.

What do I do if I miss giving a dose?

Give the dose as soon as possible. If it is almost time for the next dose, skip the missed dose, and continue with the regular schedule. Do not give the pet two doses at once.

How do I store this medicine?

- Keep this medicine out of reach of children.
- Store this medicine in a cool, dry place at room temperature. Store away from heat and direct sunlight.
- Do not store this medicine in the bathroom, near the kitchen sink or in damp places. The medicine may break down if exposed to heat or moisture.

What are the potential side effects?

- Your pet may experience a loss of appetite, restlessness, irritability, tremors, fast heart rate, high blood pressure and/or urine retention. If these symptoms appear excessive or persist, contact your veterinarian.
- Other side effects may occur. If you notice anything unusual, contact your veterinarian.

Are there any possible drug interactions?

- Make sure to tell your veterinarian what other medication you are giving to your pet.
- Quite often, your veterinarian may prescribe two different medications, and sometimes a drug interaction may occur. In this case, your veterinarian may vary the dose and/or monitor your pet more closely.
- The following drugs can potentially interact with phenylpropanolamine: tricyclic antidepressants, non-steroidal anti-inflammatory agents, halogenated anesthetic agents, ephedrine, chlorpromazine, monoamine oxidase inhibitors, reserpine, and ganglionic blocking agents.
- Contact your veterinarian if your pet experiences any unusual reactions when different medications are given together.
